SortSite is a standards-based testing tool that makes it quick and easy to check web sites for issues including accessibility, usability, browser compatibility, web standards and search engine optimization (SEO) issues.

SortSite

one-click site testing

A web site is crucial to the perception of a business or organization, so web site problems create a negative impression in the minds of site visitors. Eliminating problems improves the web site user experience, and helps sell the organization, its products and services.

Web site owners often engage third-party consultants for search engine optimization and accessibility testing. SortSite enables organizations to do this in-house for less a day's consultancy fees.

SortSite automates these checks and reduces web testing to three simple actions:

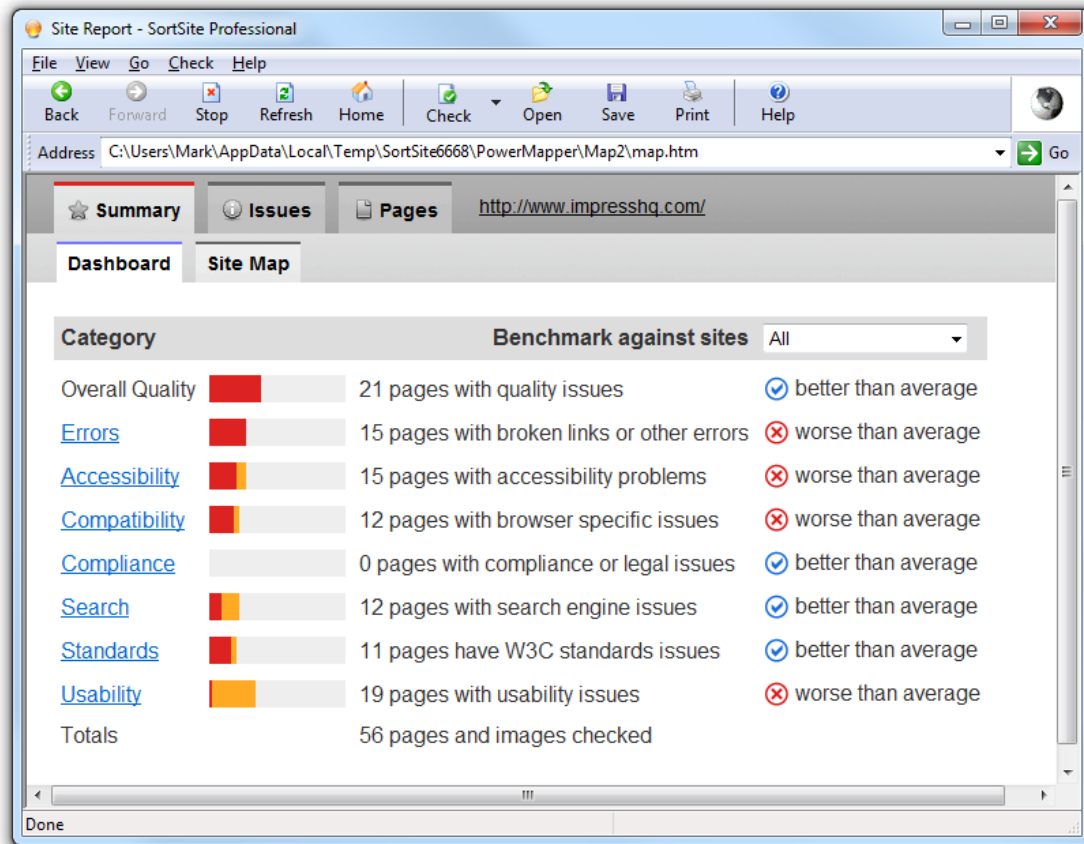

1. Type in the URL you want to test
2. Click 'Check'
3. Review the test results on the dashboard

It is as simple as that. With one click, SortSite spiders your entire site seeking out and identifying errors by testing each page against 450 checkpoints.

SortSite

one-click site testing

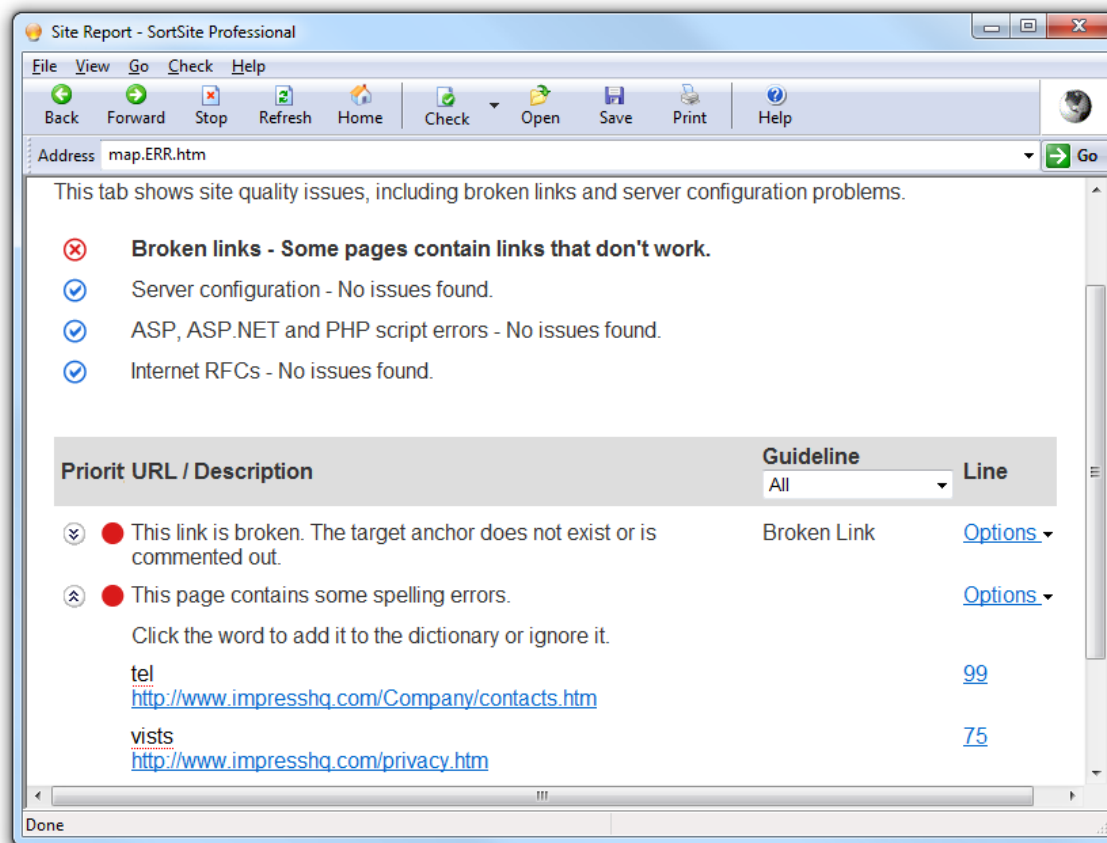

The comprehensive report produced includes an easy to use dashboard. Issues appear under seven key headings with the problem location displayed alongside every link, along with help describing how to fix the problems. This allows for clear analysis and directs the user to the problem, making it easier to resolve.

SortSite

one-click site testing

SortSite Desktop checks sites behind firewalls or still in development, making it an invaluable tool for web developers. SortSite OnDemand requires no installation and runs on any platform with a web-browser. Unlike page-at-a-time tools reporting is simple because all site issues appear on a single dashboard allowing management oversight of site quality.

SortSite is available in three editions:

- Standard Desktop Edition aimed at web developers
- Professional Desktop Edition aimed at enterprises and consultancies
- OnDemand subscription web application

Feature	Benefit	Standards Checked	Std	Pro	Web
Dashboard	Tracks issues over time and compares your site against industry sector benchmarks.		•	•	•
